Seguindo a referência 1a Cluster Kubernetes usando minikube (REFERÊNCIA 1) é necessário instalar o minikube antes
https://minikube.sigs.k8s.io/docs/tutorials/multi_node/#hello-svc.yaml
https://kubernetes.io/docs/tasks/run-application/horizontal-pod-autoscale-walkthrough/

#1 - Habilitando as métricas
minikube addons enable metrics-server

```
renato@renato-Vostro-5470:~$ minikube addons enable metrics-server
💡  metrics-server is an addon maintained by Kubernetes. For any concerns contact minikube on GitHub.
You can view the list of minikube maintainers at: https://github.com/kubernetes/minikube/blob/master/OWNERS
    ▪ Using image registry.k8s.io/metrics-server/metrics-server:v0.7.1
🌟  The 'metrics-server' addon is enabled
```

#2 - criação do arquivo com o php-apache
nano php-apache.yaml

o arquivo php-apache.yaml tem o seguinte conteúdo:

```
apiVersion: apps/v1
kind: Deployment
metadata:
  name: php-apache
spec:
  selector:
        matchLabels:
        run: php-apache
  template:
        metadata:
        labels:
        run: php-apache
        spec:
        containers:
        - name: php-apache
        image: registry.k8s.io/hpa-example
        ports:
        - containerPort: 80
        resources:
        limits:
        cpu: 500m
        requests:
        cpu: 200m
---
apiVersion: v1
kind: Service
metadata:
  name: php-apache
  labels:
        run: php-apache
spec:
```

ports:
- port: 80
selector:
run: php-apache

#3 - Demonstração do Horizontal Pod Autoscaler com a implementação de um exemplo de imagem:
kubectl apply -f https://k8s.io/examples/application/php-apache.yaml

```
renato@renato-Vostro-5470:~$ nano php-apache.yaml
renato@renato-Vostro-5470:~$ kubectl apply -f https://k8s.io/examples/application/php-apache.yaml
deployment.apps/php-apache created
service/php-apache created
renato@renato-Vostro-5470:~$
```

#4 - criação do Horizontal Pod Autoscaler o controlador HPA aumentará e diminuirá o número de réplicas para manter uma utilização média da CPU em todos os pods de 50%

kubectl autoscale deployment php-apache --cpu-percent=50 --min=1 --max=10

```
renato@renato-Vostro-5470:~$ kubectl autoscale deployment php-apache --cpu-percent=50 --min=1 --max=10
horizontalpodautoscaler.autoscaling/php-apache autoscaled
renato@renato-Vostro-5470:~$
```

#5 - verificação do status do Horizontal Pod Autoscaler
kubectl get hpa

```
renato@renato-Vostro-5470:~$ kubectl get hpa
NAME         REFERENCE               TARGETS       MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 0%/50%   1         10        1          34s
renato@renato-Vostro-5470:~$
```

#6 - Aumentando a carga de trabalho

```
^Crenato@renato-Vostro-5470:~$ kubectl run -i --tty load-generator --rm --image=busybox:1.28 --restart=Never -- /bin/sh -c "while sleep 0.01;
do wget -q -O- http://php-apache; done"
If you don't see a command prompt, try pressing enter.

renato@renato-Vostro-5470:~$
```

Seguindo a referência 1b Cluster AWS EKS (REFERÊNCIA 2).
https://docs.aws.amazon.com/eks/latest/userguide/horizontal-pod-autoscaler.html

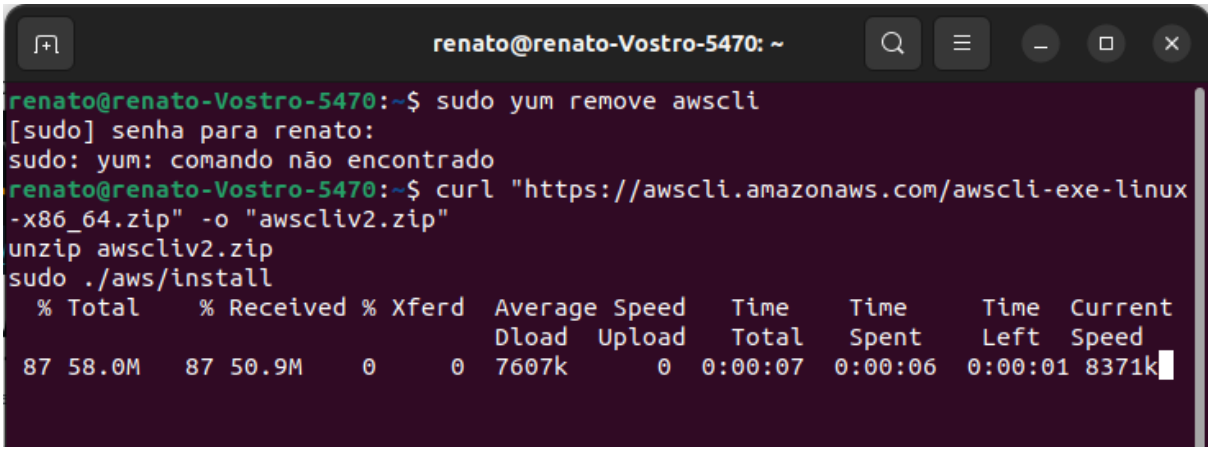
https://docs.aws.amazon.com/eks/latest/userguide/getting-started.html
https://docs.aws.amazon.com/eks/latest/userguide/getting-started-console.html

Os requisitos para iniciar o cluster AWS EKS são:

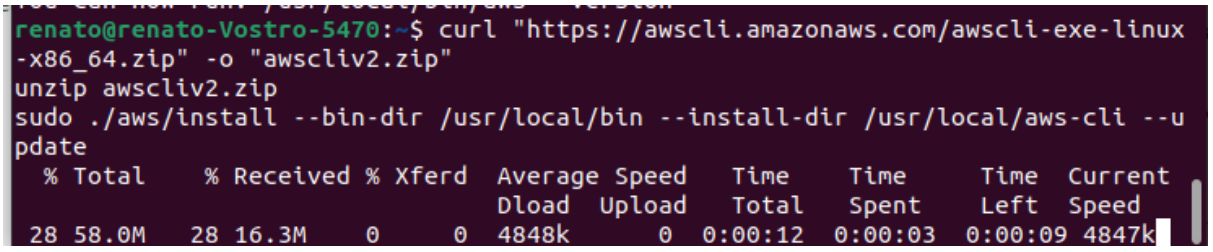
AWS CLI;
kubectl
Required IAM permissions

https://docs.aws.amazon.com/cli/latest/userguide/getting-started-install.html

#1 - Para instalar o AWS CLI os seguintes comandos foram executados:
curl "https://awscli.amazonaws.com/awscli-exe-linux-x86_64.zip" -o "awscliv2.zip"
unzip awscliv2.zip sudo ./aws/install

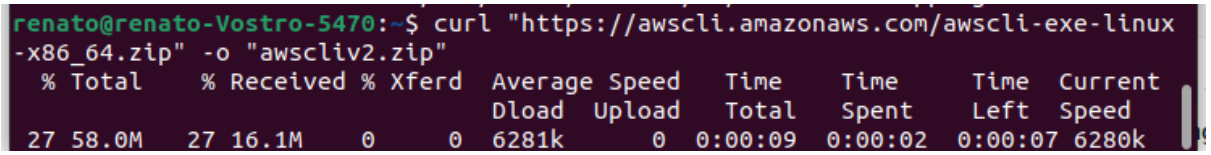


#2 Para atualizar a instalação
curl "https://awscli.amazonaws.com/awscli-exe-linux-x86_64.zip" -o "awscliv2.zip"
unzip awscliv2.zip
sudo ./aws/install --bin-dir /usr/local/bin --install-dir /usr/local/aws-cli --update

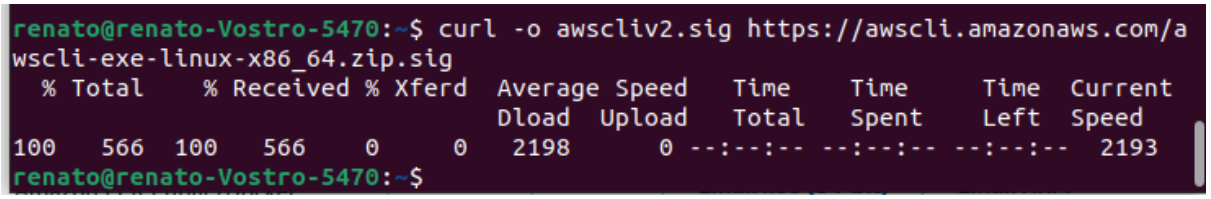


#3 As opções do comando de exemplo a seguir gravam o arquivo baixado no diretório atual com o nome local awscliv2.zip

curl "https://awscli.amazonaws.com/awscli-exe-linux-x86_64.zip" -o "awscliv2.zip"



#4 Para a última versão do AWS CLI
curl -o awscliv2.sig https://awscli.amazonaws.com/awscli-exe-linux-x86_64.zip.sig



#5 Para criar o arquivo de chave pública utilizei o comando nano awscliv2.pub e colei o conteúdo da chave:

```

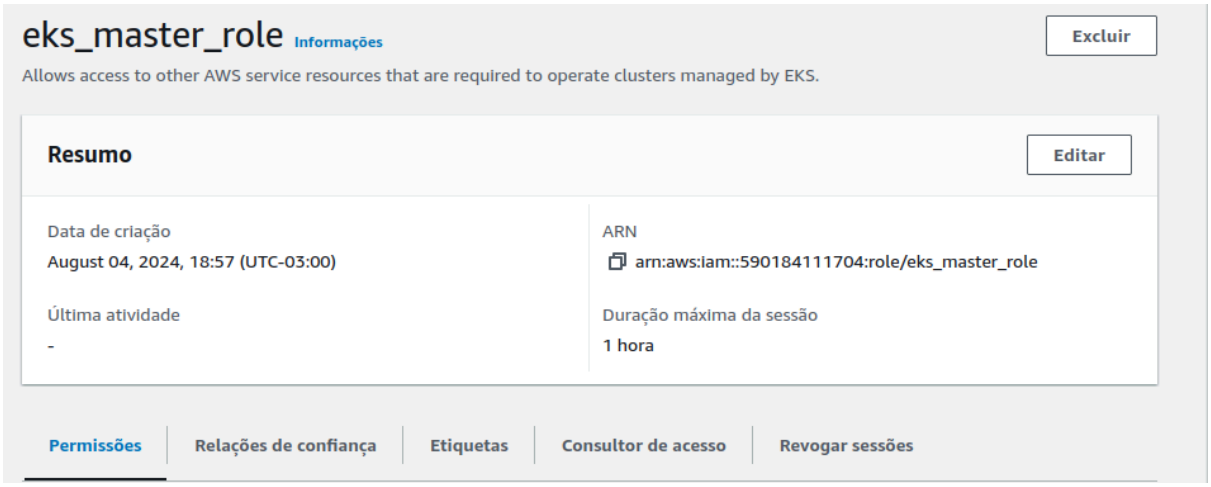
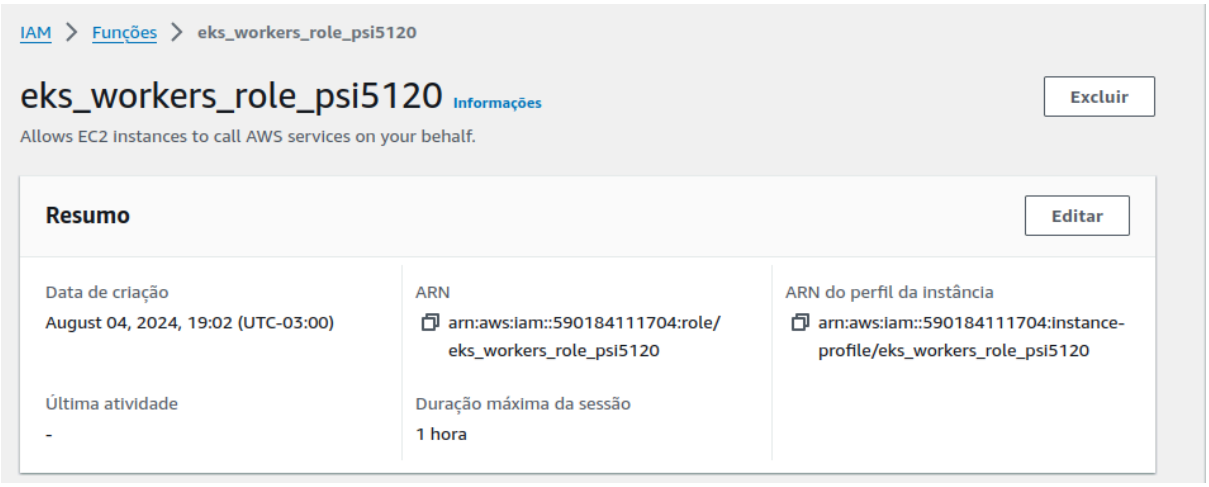
#14 - Criação do perfil (role):





#15 - Criação do cluster eks
https://docs.aws.amazon.com/eks/latest/userguide/horizontal-pod-autoscaler.html

#16 - Adicionar grupos de nós (Workers):

Configurar grupo de nós Informações

Um grupo de nós é um grupo de instâncias do EC2 que fornece capacidade computacional ao seu cluster do Amazon EKS. Você pode adicionar vários grupos de nós ao seu cluster.

Configuração do grupo de nós

Essas propriedades não poderão ser alteradas após a criação do grupo de nós.

Nome

Atribua um nome exclusivo para esse grupo de nós.

eks_node-group_1

O nome do grupo de nós deve começar com letra ou dígito e pode ter qualquer um dos seguintes caracteres: o conjunto de letras Unicode, dígitos, hifens e sublinhados. Tamanho máximo de 63.

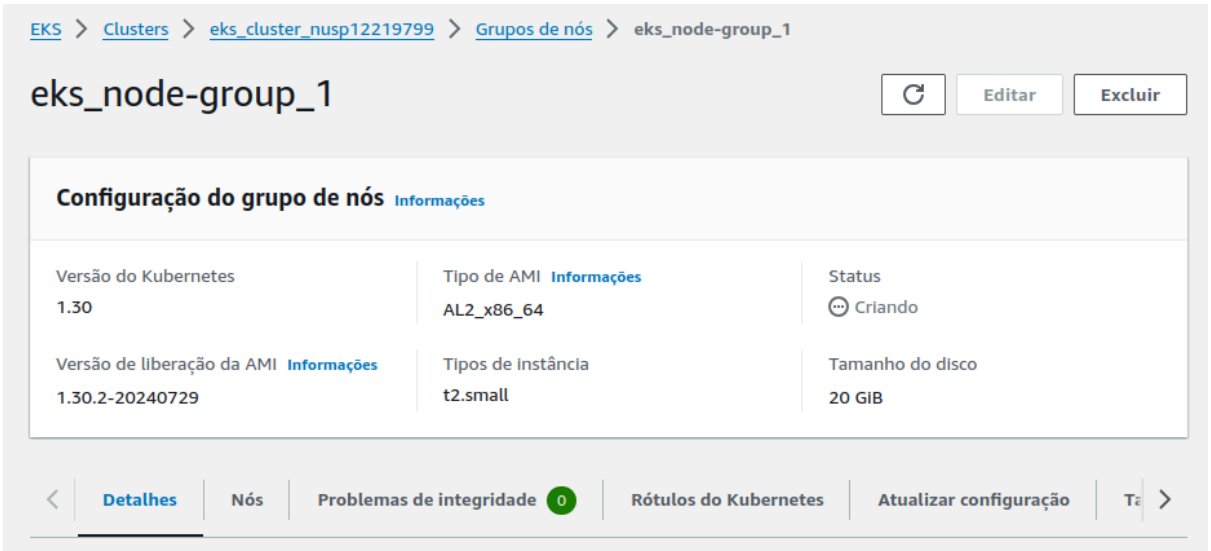
Função do IAM do nó Informações

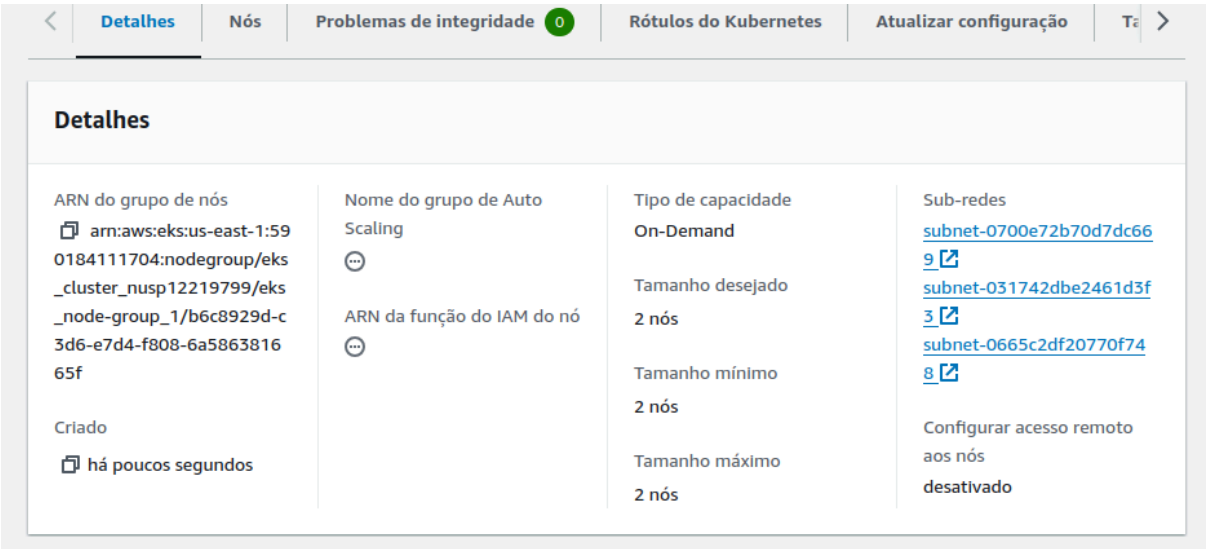
Selecione a função do IAM que será usada pelos nós. Para criar uma nova função, acesse o Console do IAM.

eks_workers_role_psi5120

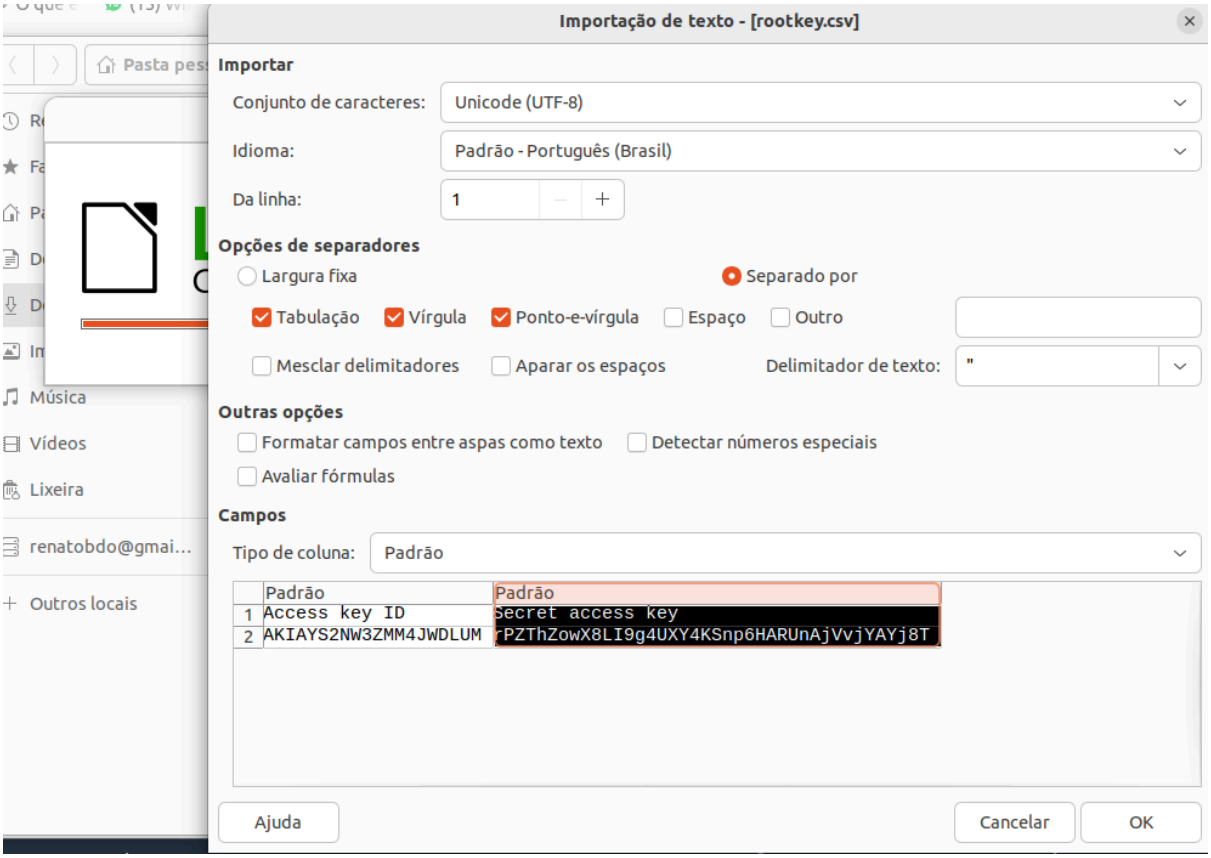
A função selecionada não deve ser usada por um grupo de nós autogerenciado, pois isso pode levar a uma interrupção do serviço após a exclusão do grupo de nós gerenciado.

Criar um perfil no console do IAM

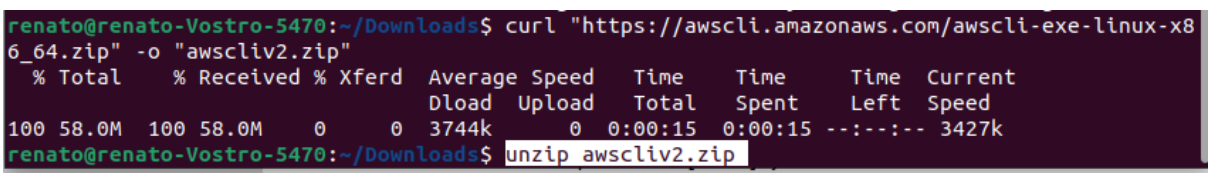


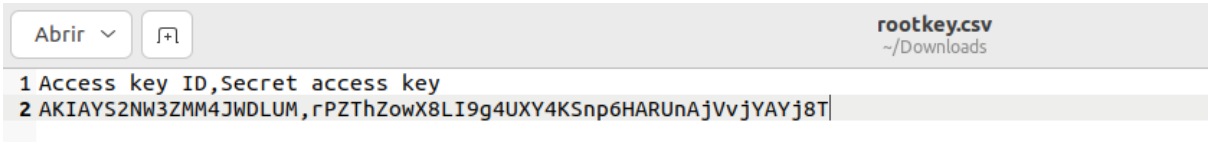


#17 - Geração de chave de acesso. Fiz o download da chave de acesso rootkey.csv:



#18 - Instalação do AWS CLI no linux (ver atividade 6-2.pdf):





#19 - Configuração

```
renato@renato-Vostro-5470:~/Downloads$ aws configure
AWS Access Key ID [None]: AKIAYS2NW3ZMM4JWDLUM
AWS Secret Access Key [None]: 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
Default region name [None]: us-east-1
Default output format [None]: json
```

#20 - Instalação do kubectl

```
renato@renato-Vostro-5470:~/Downloads$ curl -O https://s3.us-west-2.amazonaws.com/amazon-eks/
1.30.0/2024-05-12/bin/linux/amd64/kubectl
  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed
100 49.0M  100 49.0M    0     0   270k      0  0:03:06  0:03:06 --:--:--  201k
renato@renato-Vostro-5470:~/Downloads$
```

```
renato@renato-Vostro-5470:~/Downloads$ chmod +x ./kubectl
renato@renato-Vostro-5470:~/Downloads$ mkdir -p $HOME/bin && cp ./kubectl $HOME/bin/kubectl &
& export PATH=$HOME/bin:$PATH
renato@renato-Vostro-5470:~/Downloads$ echo 'export PATH=$HOME/bin:$PATH' >> ~/.bashrc
renato@renato-Vostro-5470:~/Downloads$ kubectl version --client
Client Version: v1.30.0-eks-036c24b
Kustomize Version: v5.0.4-0.20230601165947-6ce0bf390ce3
renato@renato-Vostro-5470:~/Downloads$
```

#21 - Instalação do eksctl

```
renato@renato-Vostro-5470:~/Downloads$ sudo mv /tmp/eksctl /usr/local/bin
renato@renato-Vostro-5470:~/Downloads$ eksctl version
0.188.0
renato@renato-Vostro-5470:~/Downloads$
```

#22 - Verificação da conta (ver atividade 6.1.pdf)

```
renato@renato-Vostro-5470:~/Downloads$ aws sts get-caller-identity
{
    "UserId": "590184111704",
    "Account": "590184111704",
    "Arn": "arn:aws:iam::590184111704:root"
}
renato@renato-Vostro-5470:~/Downloads$
```

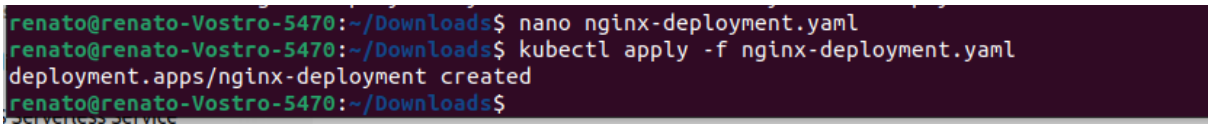
#23 - Atualização do cluster que criei na AWS

```
renato@renato-Vostro-5470:~/Downloads$ aws eks update-kubeconfig --region us-east-1 --name ek
s_cluster_nusp12219799
Added new context arn:aws:eks:us-east-1:590184111704:cluster/eks_cluster_nusp12219799 to /hom
e/renato/.kube/config
renato@renato-Vostro-5470:~/Downloads$
```

#24 - aquivo nginx-deployment.yaml

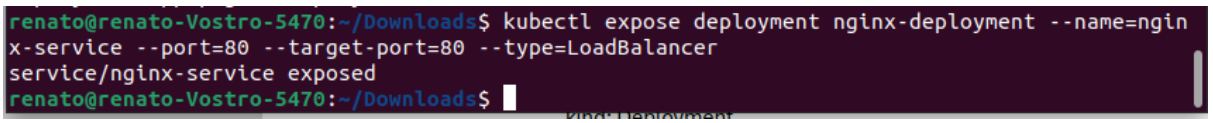
Arquivo com a formatação correta:

```
apiVersion: apps/v1
kind: Deployment
metadata:
  name: nginx-deployment
  labels:
        app: nginx
spec:
  replicas: 1
  selector:
        matchLabels:
        app: nginx
  template:
        metadata:
        labels:
        app: nginx
        spec:
        containers:
        - name: nginx
        image: public.ecr.aws/t1f2w6h8/ekswelcome:v1
        ports:
        - containerPort: 80
```



#25 - Executando o comando abaixo para expor a implantação do Nginx como um serviço LoadBalancer

kubectl expose deployment nginx-deployment --name=nginx-service --port=80 --target-port=80 --type=LoadBalance



#26 - Executando o comando abaixo para recuperar informações sobre o serviço Nginx com LoadBalance

kubectl get service nginx-service

```
renato@renato-Vostro-5470:~/Downloads$ kubectl get service nginx-service
NAME            TYPE           CLUSTER-IP      EXTERNAL-IP
                        PORT(S)        AGE
nginx-service   LoadBalancer   10.100.121.34   a3e5d92625f9e40539e6061dc541ae58-518601609.us-
east-1.elb.amazonaws.com   80:30176/TCP   45s
renato@renato-Vostro-5470:~/Downloads$
```

#27 - Informações do cluster
eksctl get nodegroup --cluster eks_cluster_nusp12219799

```
renato@renato-Vostro-5470:~/Downloads$ eksctl get nodegroup --cluster eks_cluster_nusp12219799
CLUSTER                         NODEGROUP               STATUS  CREATED                 MIN SIZE        MAX SIZE        DESIRED CAPACITY        I
NSTANCE TYPE    IMAGE ID        ASG NAME        TYPE

4       eks-eks_node-group_1-b6c8929d-c3d6-e7d4-f808-6a586381665f       managed
renato@renato-Vostro-5470:~/Downloads$
```

#28 - Testes
https://docs.aws.amazon.com/eks/latest/userguide/horizontal-pod-autoscaler.html

Primeiro precisei atualizar:
aws eks update-kubeconfig --region us-east-1 --name eks_cluster_nusp12219799

Implementação de uma aplicação de servidor web Apache simples com o comando a seguir.

kubectl apply -f https://k8s.io/examples/application/php-apache.yaml

Crie um recurso Horizontal Pod Autoscaler para a implantação do php-apache:

kubectl autoscale deployment php-apache --cpu-percent=50 --min=1 --max=10
Analisando o escalonador automático com o comando a seguir
kubectl get hpa

```
renato@renato-Vostro-5470:~$ aws eks update-kubeconfig --region us-east-1 --name eks_cluster_nusp12219799
Updated context arn:aws:eks:us-east-1:590184111704:cluster/eks_cluster_nusp12219799 in /home/renato/.kube/config
renato@renato-Vostro-5470:~$ kubectl apply -f https://k8s.io/examples/application/php-apache.yaml
deployment.apps/php-apache created
service/php-apache created
renato@renato-Vostro-5470:~$ kubectl autoscale deployment php-apache --cpu-percent=50 --min=1 --max=10
horizontalpodautoscaler.autoscaling/php-apache autoscaled
renato@renato-Vostro-5470:~$ kubectl get hpa
NAME         REFERENCE               TARGETS              MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: <unknown>/50%   1         10        1          47s
```

#29 - Criando uma carga para o servidor web executando um contêiner
kubectl run -i \
--tty load-generator \
--rm --image=busybox \
--restart=Never \
-- /bin/sh -c "while sleep 0.01; do wget -q -O- http://php-apache; done"

```
renato@renato-Vostro-5470:~$ kubectl run -i \
    --tty load-generator \
    --rm --image=busybox \
    --restart=Never \
    -- /bin/sh -c "while sleep 0.01; do wget -q -O- http://php-apache; done"
If you don't see a command prompt, try pressing enter.
OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!O
K!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK
!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!OK!^Cpod "load-generator
" deleted
pod default/load-generator terminated (Error)
```

#30 - Monitorando o resultado
kubectl get hpa php-apache
Antes de parar o serviço o uso de cpu chega a 211% e 6 replicas. Quando para o serviço com o comando control + C o percentual de uso de cpu cai pra 0% e volta ao normal.

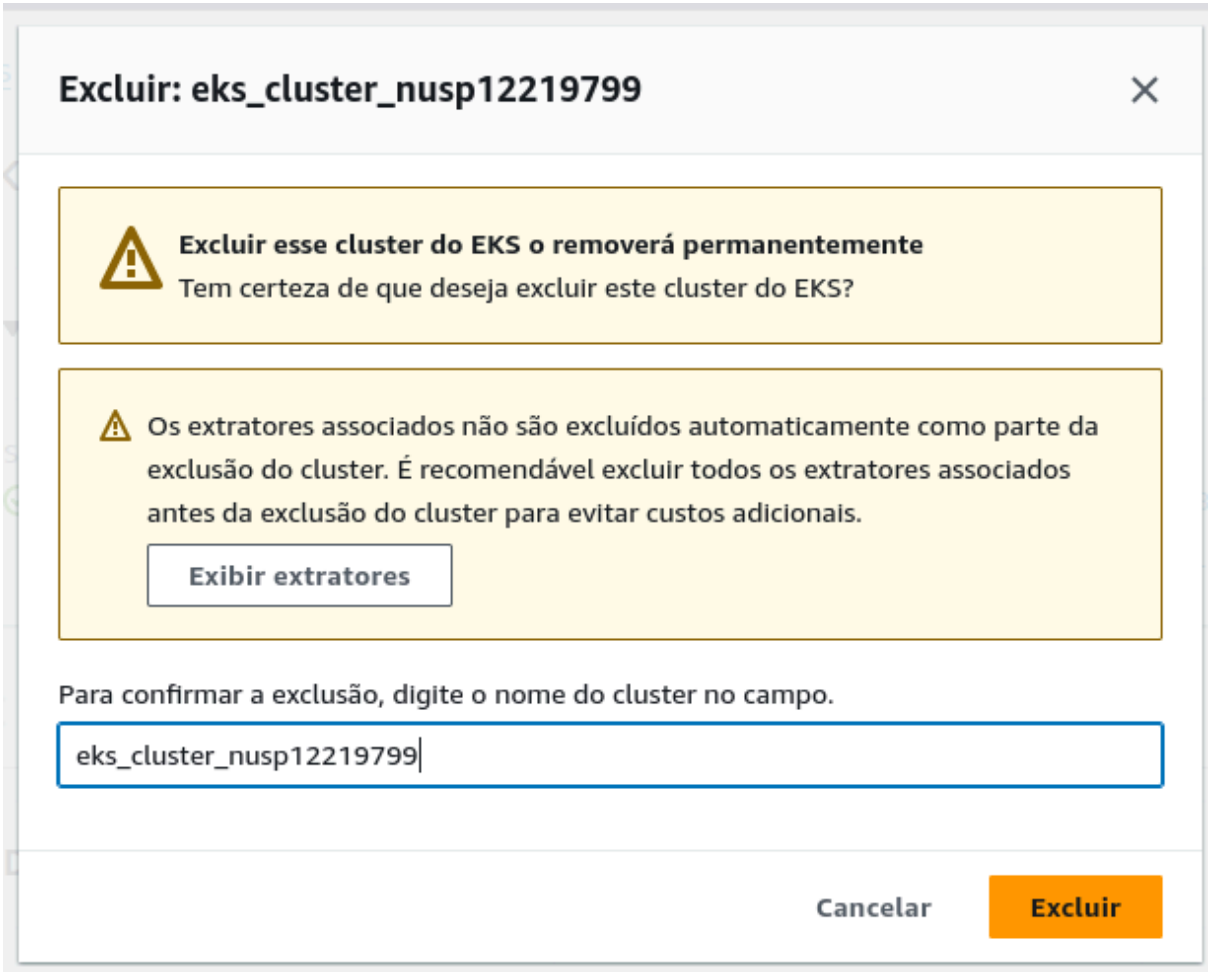
```
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS       MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 0%/50%   1         10        1          18m
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS         MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 211%/50%   1         10        1          18m
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS         MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 211%/50%   1         10        1          18m
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS         MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 138%/50%   1         10        4          18m
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS         MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 138%/50%   1         10        4          18m
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS       MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 10%/50%   1         10        6          19m
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS       MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 10%/50%   1         10        6          19m
renato@renato-Vostro-5470:~$ kubectl get hpa php-apache
NAME         REFERENCE                TARGETS       MINPODS   MAXPODS   REPLICAS   AGE
php-apache   Deployment/php-apache   cpu: 0%/50%   1         10        6          19m
```

#31 - Finalizando:

kubectl delete deployment.apps/php-apache service/php-apache horizontalpodautoscaler.autoscaling/php-apache

```
renato@renato-Vostro-5470:~$ kubectl delete deployment.apps/php-apache service/php-apache horizontalpodautoscaler.autoscaling/php-apache
deployment.apps "php-apache" deleted
service "php-apache" deleted
horizontalpodautoscaler.autoscaling "php-apache" deleted
```

#32 - Remoção do cluster:



Excluir: eks_cluster_nusp12219799
Excluir esse cluster do EKS o removerá permanentemente
Tem certeza de que deseja excluir este cluster do EKS?
Os extratores associados não são excluídos automaticamente como parte da exclusão do cluster. É recomendável excluir todos os extratores associados antes da exclusão do cluster para evitar custos adicionais.
Exibir extratores
Para confirmar a exclusão, digite o nome do cluster no campo.
